

Project Design Phase-II

Technology Stack (Architecture & Stack)

Project Title	Script-Controlled ACL – Restrict Record Access Based on Field Value
Team ID	SWTID-2026-1695
Project Name	Skill Wallet

Table-1: Components & Technologies

S.No.	Component	Description	Technology
1	User Interface	How the user interacts with the application (list view, form view of Skill Wallet Request records)	ServiceNow native UI (Now Platform UI)
2	Application Logic	Logic that restricts access to a record based on its field value	Script-Controlled ACL (server-side GlideScript)
3	Database	Storage of Skill Wallet Request records and their field values	ServiceNow platform database (custom table u skill wallet request)
4	Roles & Security	Role definitions and record-level security enforcement	ServiceNow ACL Engine, sys user role
5	Infrastructure	Where the application is deployed	ServiceNow Personal Developer Instance (Now Platform, cloud-hosted)

Table-2: Application Characteristics

S.No.	Characteristic	Description	Technology
1	Open-Source Frameworks	Not applicable — solution is built entirely on the native ServiceNow platform	Not Applicable
2	Security Implementation	Script-Controlled ACLs on Read, Create, Write, and Delete, checking Department field value and role	ServiceNow ACL Engine, GlideScript
3	Scalable Architecture	Reusable ACL script pattern that can be applied to additional tables/fields with minor changes	ServiceNow scoped application design
4	Availability	Application runs on ServiceNow's hosted cloud infrastructure	ServiceNow hosted instance (PDI)
5	Performance	Single GlideRecord lookup per ACL evaluation; minimal added latency	GlideRecord (optimized query)
